

OPERATIONS AND REFERENCE

CI/CD Guide

Workflows

Publication edition | 2026-08-03

Document Control

Purpose	Enterprise platform overview and buyer evaluation reference
Audience	Business leaders, platform administrators, evaluators, partners, and technical stakeholders
Scope	Capabilities, architecture, security, deployment, adoption, outcomes, and terminology
Source	ServicePro repository documentation; technical meaning preserved

Sprint 72 adds three GitHub Actions workflows.

```
.github/workflows/ci.yml  
.github/workflows/docker-build.yml  
.github/workflows/postgres-smoke.yml
```

CI workflow

Runs on pushes and pull requests to main and develop.

Checks:

```
npm install  
npm run migrations:check  
npm test
```

Docker build workflow

Runs on pull requests and release tags.

Checks:

```
docker build -t servicepro-api:<sha> .  
docker image inspect servicepro-api:<sha>
```

PostgreSQL smoke workflow

Starts PostgreSQL, runs migrations, and seeds services.

Branching model

Recommended:

main	production-ready
develop	integration branch
sprint-##	sprint patch branch
hotfix/*	emergency fix branch

Required branch protection

Enable these required checks before merge:

- Node runtime tests
- Build API image
- PostgreSQL migration smoke
