

OPERATIONS AND REFERENCE

Deployment Checklist

Before build

Publication edition | 2026-08-03

Document Control

Purpose	Enterprise platform overview and buyer evaluation reference
Audience	Business leaders, platform administrators, evaluators, partners, and technical stakeholders
Scope	Capabilities, architecture, security, deployment, adoption, outcomes, and terminology
Source	ServicePro repository documentation; technical meaning preserved

- Confirm .env.production exists in the deployment environment.
- Confirm JWT_SECRET and PORTAL_TOKEN_SECRET are unique and long.
- Confirm DATABASE_URL points to the production PostgreSQL database.
- Confirm CORS_ALLOWED_ORIGINS contains only trusted domains.
- Confirm DATA_STORE=postgres.

Build

```
docker build -t servicepro-api:8.0.0-alpha.1 .
```

Run database migrations

```
npm run migrate
```

Smoke checks

```
npm run config:check  
npm run deploy:check
```

Rollback

- Re-deploy the previous container tag.
- Restore database from latest verified backup if a migration rollback is required.
