

SPRINT DOCUMENTATION

Sprint 3 Notes

Added

Publication edition | 2026-08-03

Document Control

Purpose	Enterprise platform overview and buyer evaluation reference
Audience	Business leaders, platform administrators, evaluators, partners, and technical stakeholders
Scope	Capabilities, architecture, security, deployment, adoption, outcomes, and terminology
Source	ServicePro repository documentation; technical meaning preserved

Sprint 3 adds field-service financial and dispatch workflow modules while preserving the simple JSON datastore for local development.

- Dispatch calendar/list screen
- Technician assignment and scheduled time updates from dispatch
- Estimate creation
- Estimate detail with line items
- Estimate status workflow
- Quote/estimate conversion into a job
- Invoice creation
- Invoice detail with line items
- Manual payment recording
- PostgreSQL target migration for estimates and invoices

New routes

- /admin/dispatch
- /admin/estimates
- /admin/estimates/:id
- /admin/invoices
- /admin/invoices/:id

Notes

This sprint still uses the JSON datastore by default so it can be run without native database dependencies. The PostgreSQL migration is included under `src/db/postgres` for the later production adapter sprint.
