

SPRINT DOCUMENTATION

Sprint 6 Notes

Features

Publication edition | 2026-08-03

Document Control

Purpose	Enterprise platform overview and buyer evaluation reference
Audience	Business leaders, platform administrators, evaluators, partners, and technical stakeholders
Scope	Capabilities, architecture, security, deployment, adoption, outcomes, and terminology
Source	ServicePro repository documentation; technical meaning preserved

Sprint 6 adds operational controls for running ServicePro as a tenant-safe SaaS platform.

- Audit viewer for owner/manager/installer roles.
- Tenant backup generation into data/backups.
- Live tenant JSON export download.
- Tenant import/restore UI with merge and replace modes.
- Health dashboard and CLI health script.
- Public health endpoints for uptime checks.

Safety model

All backup/export/import actions are scoped to the signed-in user's `tenant_id`. Platform-level users can view audit logs across tenants, but tenant users only see their own events.

Recommended use

Before importing a replacement tenant export, create a backup first from `/admin/backups`.
