

USER GUIDE

Staff Guide

Overview

Publication edition | 2026-08-03

Document Control

Purpose	Enterprise platform overview and buyer evaluation reference
Audience	Business leaders, platform administrators, evaluators, partners, and technical stakeholders
Scope	Capabilities, architecture, security, deployment, adoption, outcomes, and terminology
Source	ServicePro repository documentation; technical meaning preserved

As office staff, you handle the day-to-day customer interactions that keep the business running — creating customer records, preparing estimates, sending invoices, processing payments, and keeping the schedule organized. This guide walks you through everything you'll use daily.

Creating and Managing Customers

What It Is

The Customers section is your master list of everyone your business serves. Each customer record holds their contact details, job history, invoices, and communication log.

Key Capabilities

- Add new customers with contact details and addresses
- Search and filter your customer list
- View a customer's complete history (past jobs, invoices, notes)
- Edit customer information
- Merge duplicate customer records

How to Create a Customer

- 1 Click Customers in the sidebar.
- 2 Click New Customer.
- 3 Enter their name, phone number, and email.
- 4 Add their service address (where work is performed).
- 5 Add any notes (gate code, pet info, preferred contact method).
- 6 Click Save.

Tips

- Always check if the customer already exists before creating a new one — use the search bar.
- Add a billing address if it's different from the service address.

- Tag customers (residential, commercial, VIP) to filter them easily later.

Creating Estimates

What It Is

An estimate is a quote you send to a customer before work begins. It lists the services, materials, and total cost so the customer can approve the work.

Key Capabilities

- Create estimates with line items (services and materials)
- Apply discounts or taxes
- Send estimates to customers for approval
- Track which estimates have been approved, declined, or are pending
- Convert approved estimates directly into invoices

How to Create an Estimate

- 1 Click Estimates in the sidebar.
- 2 Click New Estimate.
- 3 Select the customer.
- 4 Add line items — choose services from your catalog or type custom entries.
- 5 Set quantities and prices.
- 6 Add any discounts or notes.
- 7 Click Save (to finish later) or Send to Customer.

Tips

- Include a clear description of the work so the customer knows exactly what they're paying for.
- Set an expiration date on estimates to encourage timely decisions.
- You can duplicate a past estimate for a similar job to save time.

Creating Invoices

What It Is

Invoices are sent to customers after work is complete (or as agreed). They show what was done, what it costs, and how to pay.

Key Capabilities

- Create invoices from scratch or from approved estimates
- Add line items with prices, quantities, and taxes
- Set payment terms and due dates
- Send invoices by email
- Track payment status (Unpaid, Partially Paid, Paid)

How to Create an Invoice

- 1 Click Invoices in the sidebar.
- 2 Click New Invoice.
- 3 Select the customer.
- 4 Add line items (or click Import from Estimate to pull in an approved estimate).
- 5 Set the due date and payment terms.
- 6 Click Save or Send to Customer.

Tips

- Invoices sent by email include a link where customers can pay online (if online payments are enabled).
- Mark partial payments when a customer pays in installments.
- Add notes to the invoice for special instructions or thank-you messages.

Processing Payments

What It Is

Record payments as they come in — whether by card, check, cash, or bank transfer. Keep your accounts balanced and give customers receipts.

Key Capabilities

- Record full or partial payments against an invoice
- Accept multiple payment methods (cash, check, card, transfer)
- Send payment receipts automatically
- View payment history for any customer
- Process refunds when needed

How to Record a Payment

- 1 Open the invoice you're recording payment for.

- 2 Click Record Payment.
- 3 Enter the amount received.
- 4 Select the payment method.
- 5 Add a reference number if applicable (check number, transaction ID).
- 6 Click Save.

A receipt is generated automatically and can be sent to the customer.

Tips

- If a customer pays in full, the invoice status changes to Paid automatically.
- For recurring customers, you can set up automatic payment reminders for overdue invoices.
- Always record the payment method — it helps with reconciliation later.

Scheduling Appointments

What It Is

The Schedule page lets you book and manage appointments for customers. You can see who's available, find open time slots, and confirm bookings.

Key Capabilities

- View the full team schedule (day, week, or month)
- Create new appointments
- Reschedule by dragging to a new time
- Cancel appointments and notify the customer
- Check for scheduling conflicts

How to Book an Appointment

- 1 Click Schedule in the sidebar.
- 2 Click + New Appointment or click an empty time slot.
- 3 Select the customer.
- 4 Choose the service type.
- 5 Pick a date, time, and technician.
- 6 Click Save.

Tips

- Check the technician's existing schedule before booking to avoid double-booking.

- If you're not sure who to assign, leave the technician blank — a manager can assign from Dispatch later.
- Set up appointment confirmation emails to go out automatically.

Managing the Knowledge Base

What It Is

The Knowledge Base is your team's internal library of articles, guides, and how-to documents. Staff can create and organize articles that help the whole team.

Key Capabilities

- Create articles with step-by-step instructions
- Organize articles into categories
- Search the knowledge base
- Mark articles as internal-only or customer-facing

How to Add an Article

- 1 Go to Knowledge Base in the sidebar.
- 2 Click New Article.
- 3 Enter a title and choose a category.
- 4 Write the content using the text editor.
- 5 Set visibility (team only or public).
- 6 Click Publish.

Tips

- Document common questions customers ask so anyone on the team can answer consistently.
- Keep articles short and focused — one topic per article.
- Review and update articles quarterly to keep information current.

Sending Notifications

What It Is

Send messages to customers about their appointments, jobs, or invoices. Use templates for common messages or write custom ones.

Key Capabilities

- Send email or text notifications to customers
- Use pre-built templates (appointment reminders, invoice notices, follow-ups)
- Customize messages with customer and job details
- View sent message history

How to Send a Notification

- 1 Open the relevant record (customer, appointment, or invoice).
- 2 Click the Notify button or envelope icon.
- 3 Choose a template or write your message.
- 4 Select delivery method (email, text, or both).
- 5 Review and click Send.

Tips

- Double-check the customer's contact details before sending, especially for new customers.
- Use templates for consistency — they automatically fill in names, dates, and job details.
- Check the message log if a customer says they didn't receive something.

Viewing Reports

What It Is

Reports help you track what's happening across the business. As staff, you can view customer reports, invoice summaries, and payment records.

Key Capabilities

- View outstanding invoices and aging reports
- Track daily/weekly payment collections
- See customer activity (new sign-ups, repeat visits)
- Export reports as spreadsheets

How to View a Report

- 1 Click Reports in the sidebar.
- 2 Choose the report type.
- 3 Set your date range and any filters.
- 4 Click Generate.
- 5 Click Export to download a copy if needed.

Tips

- The "Aging Report" shows which invoices are overdue and by how long — great for follow-up calls.
- Export payment reports at the end of each day for your records.
- Use filters to narrow down to specific customers or time periods.
