[Document Control](#)

[Build](#)

[Run database migrations](#)

[Smoke checks](#)

[Rollback](#)

- Confirm `.env.production` exists in the deployment environment.
- Confirm `JWT_SECRET` and `PORTAL_TOKEN_SECRET` are unique and long.
- Confirm `DATABASE_URL` points to the production PostgreSQL database.
- Confirm `CORS_ALLOWED_ORIGINS` contains only trusted domains.
- Confirm `DATA_STORE=postgres`.

Build

```
docker build -t servicepro-api:8.0.0-alpha.1 .
```

Run database migrations

```
npm run migrate
```

Smoke checks

```
npm run config:check  
npm run deploy:check
```

Rollback

- Re-deploy the previous container tag.
- Restore database from latest verified backup if a migration rollback is required.
