[Data integrity check](#)

SEV1: Production unavailable or data corruption suspected.
SEV2: Major feature unavailable.
SEV3: Partial degradation.

SEV1 recovery steps

- 1 Freeze deploys.
- 2 Preserve logs, audit events, and latest database snapshot.
- 3 Identify latest verified backup.
- 4 Restore backup to staging first.
- 5 Validate application boot and data integrity.
- 6 Promote restored database or re-point application.
- 7 Run post-restore checks.
- 8 Document root cause.

Post-restore checks

```
npm run config:check  
npm run migrations:check  
npm test  
Invoke-RestMethod https://your-domain/healthz  
Invoke-RestMethod https://your-domain/readyz
```

Data integrity check

```
POST /api/v1/integrity/run  
GET /api/v1/integrity
```
