Date: August 2026 Repository: D:\ServiceRepo

Subscription/Billing Infrastructure

- `src/services/billing.js` — Legacy billing with plan codes (starter/growth/pro), trialing status, Stripe stubs
- `apps/api/src/services/billingMonetizationService.js` — Full subscription model with trialing status, trialDays per plan, entitlements, invoices, payments, credits, dunning
- `apps/api/src/repositories/billingMonetizationRepository.js` — Repository with `checkEntitlement()` method
- `SUBSCRIPTION_STATUSES` = ['trialing', 'active', 'past_due', 'paused', 'cancelled', 'expired']

Registration Flow

- `apps/web/src/app/register/page.tsx` — Registration page exists
- `apps/web/src/components/RegisterForm.tsx` — Simple form (name, email, password)
- `apps/api/src/routes/auth.js` → `register()` — Gated by `ALLOW_PUBLIC_REGISTRATION=true` env var
- Creates user with technician role in the existing tenant context
- No tenant provisioning — registers within an existing workspace

Platform Admin Concepts

- `apps/admin/src/pages/platform/config/GlobalSettingsPage.tsx` — Has `trialDays` and `signupEnabled` fields
- `apps/admin/src/pages/platform/DashboardPage.tsx` — Shows `trialTenants` count
- `apps/admin/src/pages/platform/subscriptions/PlansPage.tsx` — Shows trialing status option
- `apps/admin/src/pages/platform/support/AnnouncementsPage.tsx` — Has trial audience option

Platform Dashboard

- `apps/api/src/routes/platformTenantDashboard.js` — Treats `status === 'trial'` as healthy
- `apps/api/src/repositories/platformOperationsCenterRepository.js` — Counts `subscriptionStatus === 'trialing'`

"Start Free" Button

- `apps/web/src/components/PublicHeader.tsx` — "Start free" button links to `/login` (incorrect)

Multi-Tenant Provisioning

- Platform admin can create owners via `PlatformAdminWorkspace.tsx`
- `apps/api/src/routes/platformAccess.js` — `createOwner()` provisions tenant + user
- No self-service public tenant creation

2. What Is Incomplete

Component	Status
Self-service trial registration	Missing — current register creates user in existing tenant only

Component	Status
Trial tenant provisioning	Missing — only admin can create tenants
Email verification	Missing — no outbound email, no verification tokens
Trial duration tracking	Missing — no trial_started_at / trial_expires_at on tenant
Trial expiration enforcement	Missing — no middleware checks trial status
Onboarding checklist	Missing — no guided setup
Product tour / walkthrough	Missing — no tour library
Industry selection during signup	Missing — no trial-time industry picker
Industry pack installation (self-service)	Missing — exists for admin only
Sample data provisioning	Missing — seed scripts exist but not user-triggered
Upgrade flow	Missing — billing checkout is a stub
Trial dashboard banner	Missing — no days-remaining display
Trial notifications	Missing — no lifecycle emails
Trial admin panel	Partial — admin UI has trial status fields but no trial management
Trial analytics/funnel	Missing — no event tracking for trial conversion

3. Nonfunctional Buttons

Button/CTA	Location	Current Behavior	Required
"Start free"	PublicHeader.tsx	Links to /login	Link to /start-free

4. Missing Routes

Route	Purpose
POST /api/v1/trial/register	Self-service trial signup
POST /api/v1/trial/verify-email	Email verification
POST /api/v1/trial/resend-verification	Resend verification
GET /api/v1/trial/status	Trial status for current user
POST /api/v1/trial/select-industry	Set industry during onboarding
POST /api/v1/trial/install-pack	Install industry configuration
POST /api/v1/trial/sample-data	Seed sample data
DELETE /api/v1/trial/sample-data	Remove sample data
GET /api/v1/trial/onboarding	Get onboarding progress
PATCH /api/v1/trial/onboarding/:step	Complete onboarding step
POST /api/v1/trial/upgrade-request	Request upgrade / contact sales

5. Database Records

- No trial-specific columns on tenant table currently
- Subscription model supports trialing status but not self-provisioned

- No trial_started_at, trial_expires_at fields in existing schema
- Entitlement model exists and can be reused for trial limits

6. Implementation Plan

Build the full trial system leveraging:

- Existing billingMonetizationService.js for subscription/entitlement model
- Existing auth.js registration logic (password validation, session issuance)
- Existing platform admin tenant creation pattern
- Existing industry/service catalog in publicStorefront.js

New components needed:

- Trial registration route + service
- Trial provisioning service (extends platform access pattern)
- Trial middleware (check expiration)
- Onboarding service + routes
- Frontend: start-free page, trial dashboard, onboarding UI
- Migration: trial fields on tenant_settings
