

RELEASE DOCUMENTATION

ServicePro 8.0.0-alpha.1 — PostgreSQL Certification

Evidence

Publication edition | 2026-08-03

Document Control

Purpose	Enterprise platform overview and buyer evaluation reference
Audience	Business leaders, platform administrators, evaluators, partners, and technical stakeholders
Scope	Capabilities, architecture, security, deployment, adoption, outcomes, and terminology
Source	ServicePro repository documentation; technical meaning preserved

Table of Contents

[Document Control](#)

[Defects corrected during certification](#)

Database engine tested: PostgreSQL 16.14 Result: Pass

Test	Result
Start from an empty database	Pass
Apply complete migration history	Pass — 685 migrations
Re-run migrations	Pass — idempotent, 685 skipped
Readiness and authenticated login	Pass
Dashboard query	Pass
Customer creation/read	Pass
Job/work-order creation/read	Pass
Technician creation/read	Pass
Appointment and dispatch persistence	Pass
CRM lead persistence	Pass
Marketing campaign persistence	Pass
Invoice creation	Pass
Partial payment and remaining balance	Pass
Final payment and paid status	Pass
Payment audit-event persistence	Pass — 2 events
Cross-tenant customer visibility	Pass — record hidden
Logical backup with pg_dump	Pass
Restore into a separate database	Pass
Critical row-count comparison	Pass
Authenticated smoke against restored database	Pass

Defects corrected during certification

- Migration 779 assumed columns from a newer CRM model even when the historical Sprint 46 tables already existed. It now upgrades additively and normalizes tenant ownership.
- Migration 780 required the undeclared vector extension although the application stores but does not execute vector-distance queries. Embeddings now use portable jsonb, removing an undeclared deployment dependency.
- PostgreSQL CRM and marketing repositories now execute real database operations instead of relying on incompatible legacy shapes.

The disposable databases and containers used for this certification are not production assets.
