

RELEASE DOCUMENTATION

ServicePro 8.0.0-alpha.1 — Test Evidence

Traceability

Publication edition | 2026-08-03

Document Control

Purpose	Enterprise platform overview and buyer evaluation reference
Audience	Business leaders, platform administrators, evaluators, partners, and technical stakeholders
Scope	Capabilities, architecture, security, deployment, adoption, outcomes, and terminology
Source	ServicePro repository documentation; technical meaning preserved

Table of Contents

[Document Control](#)

Evidence date: 2026-07-27 Environment: Windows, Node.js 22.13.0, npm, Docker Desktop, PostgreSQL 16.14, Redis 7.4.10

Command or exercise	Result
Root npm ci	Pass; deterministic install; 0 vulnerabilities reported
Frontend npm ci	Pass; valid dependency tree
Frontend offline audit	Pass; 0 vulnerabilities reported
npm run web:typecheck	Pass
npm run build	Pass; API syntax, TypeScript, Next.js production build, 43 routes, Render validation
npm test	Pass; all 763 test files
npm run scripts:check	Pass; all 619 package commands resolve
Blank PostgreSQL migration	Pass; all 685 migrations
Migration replay	Pass; 0 applied and 685 skipped
npm run deploy:smoke:postgres	Pass; readiness, login, dashboard
PostgreSQL business-flow exercise	Pass; customer through payment audit plus tenant isolation
PostgreSQL backup/restore exercise	Pass; restored counts and authenticated smoke
Redis PING	Pass
Browser login	Pass; owner authenticated and redirected to dashboard
Browser dashboard	Pass; live tenant KPIs/work displayed, no console errors
Browser customer workspace	Pass; active navigation and persisted customer/service data
Browser mobile check	Pass; 390×844, menu controls functional, no horizontal overflow, no console errors
Production Compose without required environment	Pass as a safety test; configuration fails closed
Production Compose with documented example	Pass; configuration parses

Remediation commits:

- 1eb9e96 payment transaction integrity
- ad4d169 release test reconciliation
- 5008ac1 runtime configuration normalization
- 69fe643 package-command integrity
- 5220b02 deterministic frontend build
- e9b1169 production deployment alignment
- 8a6c0a3 PostgreSQL migration/runtime compatibility

Raw console output is intentionally not committed because it is machine-specific and may contain operational metadata. The commands above are the reproducible evidence boundary.
