

SPRINT DOCUMENTATION

Sprint 5 Notes

New Admin Screens

Publication edition | 2026-08-03

Document Control

Purpose	Enterprise platform overview and buyer evaluation reference
Audience	Business leaders, platform administrators, evaluators, partners, and technical stakeholders
Scope	Capabilities, architecture, security, deployment, adoption, outcomes, and terminology
Source	ServicePro repository documentation; technical meaning preserved

Table of Contents

[Document Control](#)

[Notes](#)

Adds production-oriented platform features without breaking local development:

- Storage provider service layer
 - Local upload mode remains default
 - S3-compatible staged mode via `STORAGE_MODE=s3`
 - Tenant billing/subscription tables
 - Plan usage tracking
 - Stripe Checkout stub events
 - Tenant custom domain settings
 - Domain resolution middleware
 - Production hardening checklist
-
- `/admin/storage`
 - `/admin/billing`
 - `/admin/domains`
 - `/admin/production`

Notes

S3 and Stripe are staged safely in this sprint. No real cloud calls are required for `npm install`, `npm run setup`, or `npm run dev`. Sprint 6 should replace the S3 stub with a real SDK `PutObjectCommand` and add Stripe webhook processing.
