[Document Control](#)

This sprint prepares the runtime to switch from JSON to PostgreSQL.

Implemented:

- DATA_STORE=json|postgres
- Store provider factory.
- JSON adapter.
- PostgreSQL adapter contract.
- Customer repository factory.
- Job repository factory.
- PostgreSQL customers/jobs target migration.
- Environment validation.

The PostgreSQL adapter intentionally declares the runtime surface but does not yet use the pg package. Sprint 53 should implement the actual pg adapter and wire the API runtime to repositories.
