This page provides quick step-by-step instructions for the most common things you'll do in ServicePro. Each task is kept short so you can follow along quickly.

How to Create a Customer

- 1 Click Customers in the sidebar.
- 2 Click New Customer.
- 3 Fill in the customer's name, phone, and email.
- 4 Add their service address.
- 5 Add any notes (gate code, pet info, preferred contact method).
- 6 Click Save.

Tip: Search for the customer first to avoid creating duplicates.

How to Create a Work Order

- 1 Click Jobs in the sidebar.
- 2 Click New Work Order.
- 3 Select the customer (or create a new one).
- 4 Choose the service type from the dropdown.
- 5 Add a description of the work needed.
- 6 Set the priority level (Low, Normal, High, Urgent).
- 7 Assign a technician (optional — can be done later from Dispatch).
- 8 Click Create.

Tip: Add detailed notes about the issue so the technician knows what to expect.

How to Schedule an Appointment

- 1 Click Schedule in the sidebar.
- 2 Click + New Appointment or click an empty time slot on the calendar.
- 3 Select the customer.
- 4 Choose the service type.
- 5 Pick the date and time.
- 6 Assign a technician.
- 7 Click Save.

Tip: Check the technician's existing schedule to avoid double-booking.

How to Create an Estimate

- 1 Click Estimates in the sidebar.
- 2 Click New Estimate.
- 3 Select the customer.
- 4 Add line items — services and/or materials with quantities and prices.
- 5 Add notes or terms if needed.
- 6 Click Save to finish later, or Send to Customer to email it immediately.

Tip: Set an expiration date so customers know how long the pricing is valid.

How to Convert an Estimate to an Invoice

- 1 Click Estimates in the sidebar.
- 2 Find the estimate that has been approved by the customer.
- 3 Open it and click Convert to Invoice.
- 4 Review the line items (make adjustments if the scope changed).
- 5 Set the due date and payment terms.
- 6 Click Create Invoice.

Tip: Only approved estimates can be converted. If the status still shows "Pending," follow up with the customer first.

How to Record a Payment

- 1 Click Invoices in the sidebar.
- 2 Open the invoice you're recording payment for.
- 3 Click Record Payment.
- 4 Enter the amount received.
- 5 Select the payment method (cash, check, card, transfer).
- 6 Add a reference number if applicable.
- 7 Click Save.

Tip: For partial payments, enter only the amount received — the invoice will show the remaining balance.

How to Add Inventory Items

- 1 Click Inventory in the sidebar.
- 2 Click Add Item.
- 3 Enter the item name, description, and category.

- 4 Set the unit cost and current quantity in stock.
- 5 Set a reorder threshold (you'll get an alert when stock drops below this number).
- 6 Click Save.

Tip: Use consistent naming conventions so everyone on the team can find items quickly.

How to Send a Notification

- 1 Open the relevant record (customer, appointment, job, or invoice).
- 2 Click the Notify button or envelope icon.
- 3 Choose a message template or write a custom message.
- 4 Select the delivery method — email, text message, or both.
- 5 Click Send.

Tip: Use templates for consistency. They automatically fill in customer names, dates, and details.

How to Export Data

- 1 Click Reports in the sidebar.
- 2 Choose the report type you want to export (customers, jobs, invoices, etc.).
- 3 Set your date range and any filters.
- 4 Click Generate.
- 5 Click Export in the top-right corner.
- 6 Choose your format (spreadsheet is the most common).
- 7 The file downloads to your computer.

Tip: Exports include all columns visible in the report. Adjust filters before exporting to get only the data you need.

How to Change Your Password

- 1 Click your profile icon in the top-right corner.
- 2 Click Account Settings.
- 3 Click Change Password.
- 4 Enter your current password.
- 5 Enter your new password (at least 8 characters, mix of letters and numbers).
- 6 Confirm your new password.
- 7 Click Save.

Tip: Use a unique password you don't use on other websites. Consider using a password manager.

How to Enable Two-Factor Authentication

- 1 Click your profile icon in the top-right corner.
- 2 Click Account Settings.
- 3 Find the Security section.
- 4 Click Enable Two-Factor Authentication.
- 5 Open your authenticator app on your phone (like Google Authenticator or Authy).
- 6 Scan the QR code shown on screen.
- 7 Enter the 6-digit code from your app to confirm.
- 8 Save the backup codes in a secure place (in case you lose access to your phone).
- 9 Click Done.

Tip: Two-factor authentication adds a second layer of security. Even if someone guesses your password, they can't get in without your phone.
